Built Different. For a Change.

EngageOS isn't just another tech platform — it's a digital infrastructure built from the ground up for purpose-driven organizations. From white-label sovereignty to field-ready resilience, every element of EngageOS is designed to meet the real-world challenges of civil society.

Built for Civil Society

Purpose-First, Not Profit-First

Unlike traditional SaaS built for commercial scale, EngageOS was born from the realities of NGOs, grassroots coalitions, and purpose-led institutions. Every module, flow, and metric is optimized to serve impact — not ad revenue or venture capital.

White-Label, Zero-Code

Your Brand, Your Movements

EngageOS empowers organizations to fully own their digital identity. From Red Cross OS to Montessori OS, each instance is custom-branded — no tech team required. You launch a platform that looks and feels like you, not us.

Sovereign & Ethical Infrastructure

Own Your Data. Always.

We don't mine or monetize user data. EngageOS runs on decentralized, privacy-respecting infrastructure — built for trust, compliance, and sovereignty. You control where your data lives and who sees it.

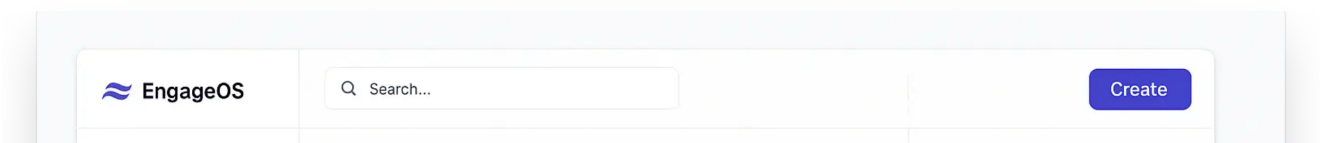

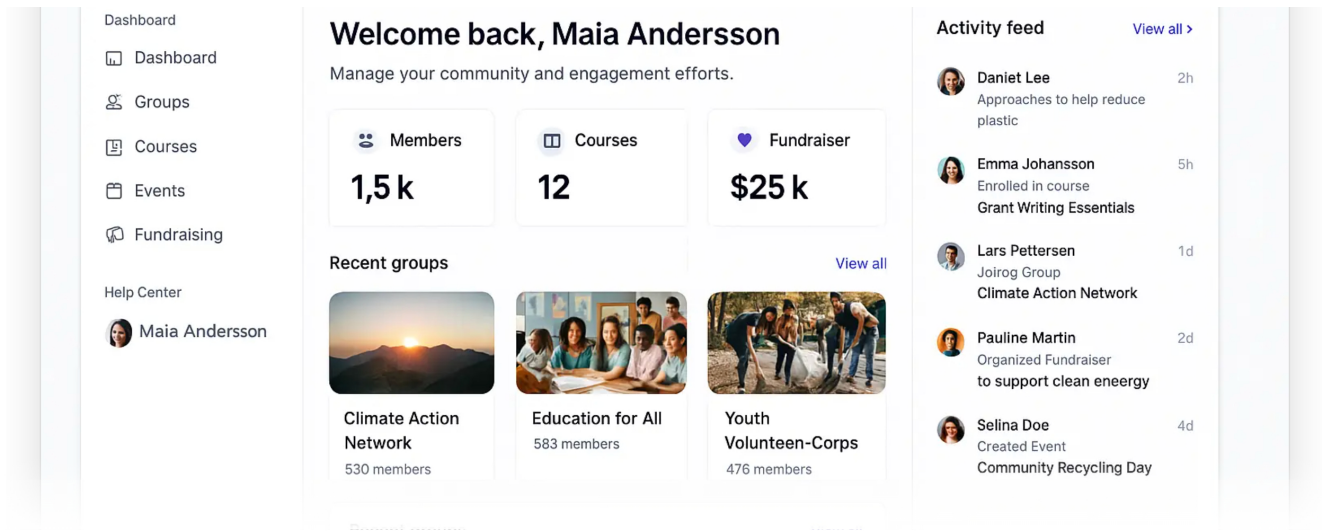

Mutualized Model

Share Infrastructure. Multiply Impact.

By pooling tech costs across aligned organizations, EngageOS offers enterprise-grade functionality at a fraction of the price. When one partner grows, the entire ecosystem benefits — through shared modules, updates, and insights.

The Platform Built for Purpose-driven Organizations

EngageOS is the first plug-and-play engagement infrastructure built for civil society. From Red Cross OS to Montessori OS, any org can launch their own digital headquarters—no tech team needed.

Frequently asked questions

If you have anything else you want to ask, <u>reach out to us</u>.

What is EngageOS?

EngageOS is a white-label engagement platform built specifically for purpose-driven organizations. It allows NGOs, foundations, and impact coalitions to launch their own branded platforms to engage communities, deliver training, and mobilize support.

Do I need a tech team to use EngageOS?

No. EngageOS is fully plug-and-play. It's designed so any organization—regardless of technical capacity—can deploy and customize their own platform without writing a line of code.

Can we fully customize the platform's look and feel?

Absolutely. From logos and colors to navigation and community features, EngageOS supports full white-label customization so the platform feels like your own digital headquarters.

What kinds of organizations use EngageOS?

We work with NGOs, educational networks, development agencies, faith-based groups, and mission-aligned coalitions that want to better engage, train, and mobilize their communities at scale.

Is EngageOS multilingual and accessible offline?

Yes. The platform supports multilingual content and offline-friendly delivery—ideal for reaching underserved communities with limited connectivity.

Can we use EngageOS for fundraising?

Yes. EngageOS includes built-in fundraising tools, including peer-to-peer, micro-donation, and pay-it-forward models—plus full donor engagement capabilities.

How is EngageOS different from other platforms?

Unlike general-purpose platforms, EngageOS is mission-built for civil society. It integrates engagement, learning, and fundraising in one secure, ethical platform—hosted on sovereign infrastructure.

What is the pricing model?

EngageOS operates on a flexible SaaS model, with plans ranging from €30K to €300K annually depending on features and user scale. For grassroots initiatives, pay-it-forward and sponsorship models are also available.

How do we get started?

Reach out to our team for a demo or strategy session. We'll walk you through the options and help design the best deployment path for your mission.
