

Threefold is a technological provider of decentralized cloud infrastructure. Unlike other Depin projects that run at the protocol level, Threefold has developed its own hosting OS running on bare metal combined with a proprietary network and data storage technology.

Our technology provides sovereign infrastructure, meaning that data stays local and cannot be lost nor corrupt. Thanks to our unmatched level of security, we have been mandated to deploy the underlying software for the public digital infrastructure of governments.

We are the only project with a working bare metal solution which resolves the biggest bottlenecks for the plumbing of Internet, Blockchain and Cloud on the 3 required levels

Data

- Our data, non compromised, always private, scaling to the planetary level, can be distributed and stored in ways which are at least 10x more efficient and orders of magnitude more secure and reliable.

Network

- End to end encrypted overlay network looking for the shortest path between participants. Logical internet address linked to private key, unlimited scale and performance optimizations.

Cloud

- Self healing & driving cloud, bare metal efficient secure operating system, run every web 2,3, AI workload at the edge of the internet with more scalability and reliability.

Who we are

The team have previously successfully launched and exited 6 companies worth a total of 600M in the cloud and storage space. We are strong believers of open-source, see <https://github.com/threefoldtech>

Traction

- ★ A live POC network with 60k CPUs/20PB in 50 countries through 2100 clusters
- ★ 2 Partnerships with government and creation of a Digital FreeZone
- ★ 3 Partnerships with Tier 1 Telcos
- ★ Alliance with Layer 1 blockchains
- ★ Successful rounds at equity level

Fundraising

We are launching our token \$INCA on Solana blockchain to foster expansion of our Threefold grid and positioning us for a major commercial expansion.

To do so, we are gathering a group of strategic investors from the web3 space with complementary profiles (VC, Founders, L1, MM, CEX) to support us as part of our limited strategic round.
